

**ABSTRACT**

The invention relates to an assembly for the preparation of an egg-product comprising dried egg (2) and a container (1) which is designed to house said dried egg (2) until it is to be used. According to the invention, the container consists of a bag (1) comprising at least two compartments (11, 12) which are separated from one another by means of a pressure-breakable welded seam (13). One of the aforementioned compartments (11) houses a pre-determined quantity of dried egg (2), while the other compartment (12) houses a pre-determined quantity of water (3). The invention can be employed to store, transport and use the ingredients necessary to prepare a product, such as a tortilla, without having to measure or weigh the quantities of each ingredient, while guaranteeing the highest hygiene standards.
